

SALES & REVENUE ANALYSIS DASHBOARD – PROJECT REPORT

1. PROJECT TITLE

Sales & Revenue Analysis Dashboard using Power BI

2. OBJECTIVE

The main goal of this project is to analyze sales data and understand how the business is performing. I used Power BI to track important metrics like sales, profit, orders, and discounts, and to find useful insights from the data.

3. TOOL USED

- Microsoft Power BI

4. DATASET DESCRIPTION

The dataset contains sales transaction details such as Order ID, Order Date, Product Name, Category, Region, Sales, Profit, and Discount. It helps in understanding how different products and categories are performing across regions and time periods.

5. KPIs USED

- Total Orders: 5009
- Total Sales: 22.64K
- Total Profit: 8.40K
- Total Discount: 240

6. VISUALIZATIONS USED

To analyze the data, I used different visuals in Power BI:

- Line Chart to show sales trends over time
- Bar Chart to identify top-performing products
- Pie/Donut Chart for category-wise sales and profit distribution
- Gauge Chart to compare sales with target
- Slicers for filtering data by region, category, and product

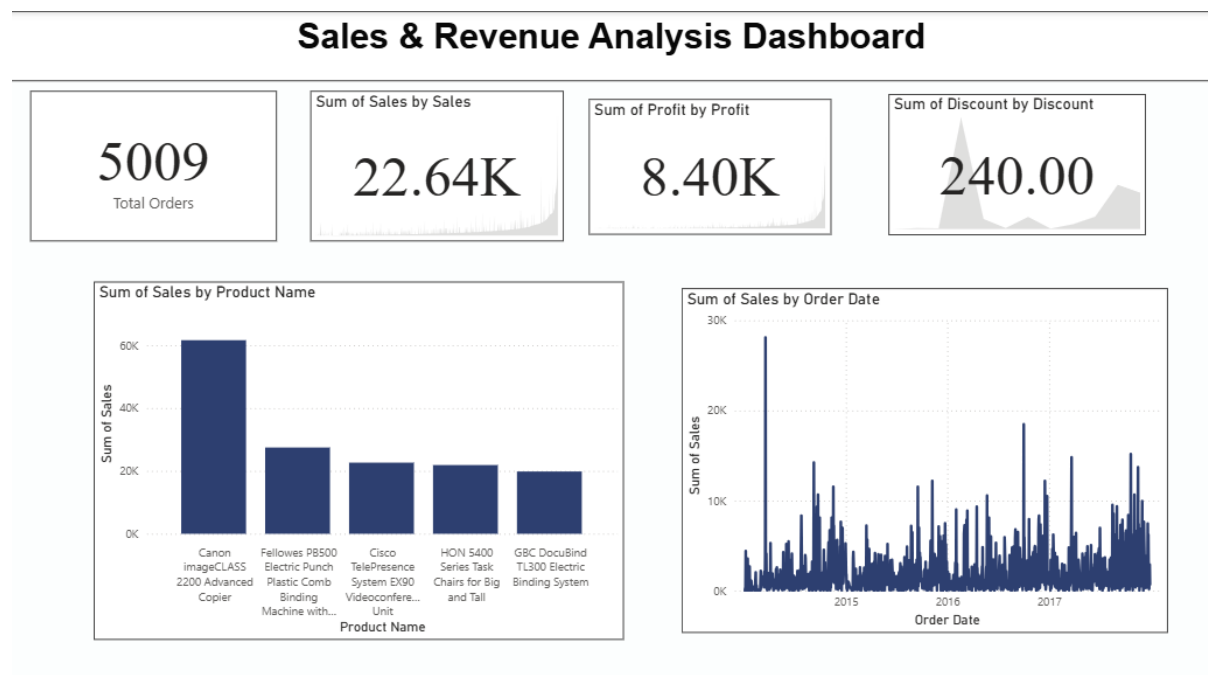

7. KEY INSIGHTS

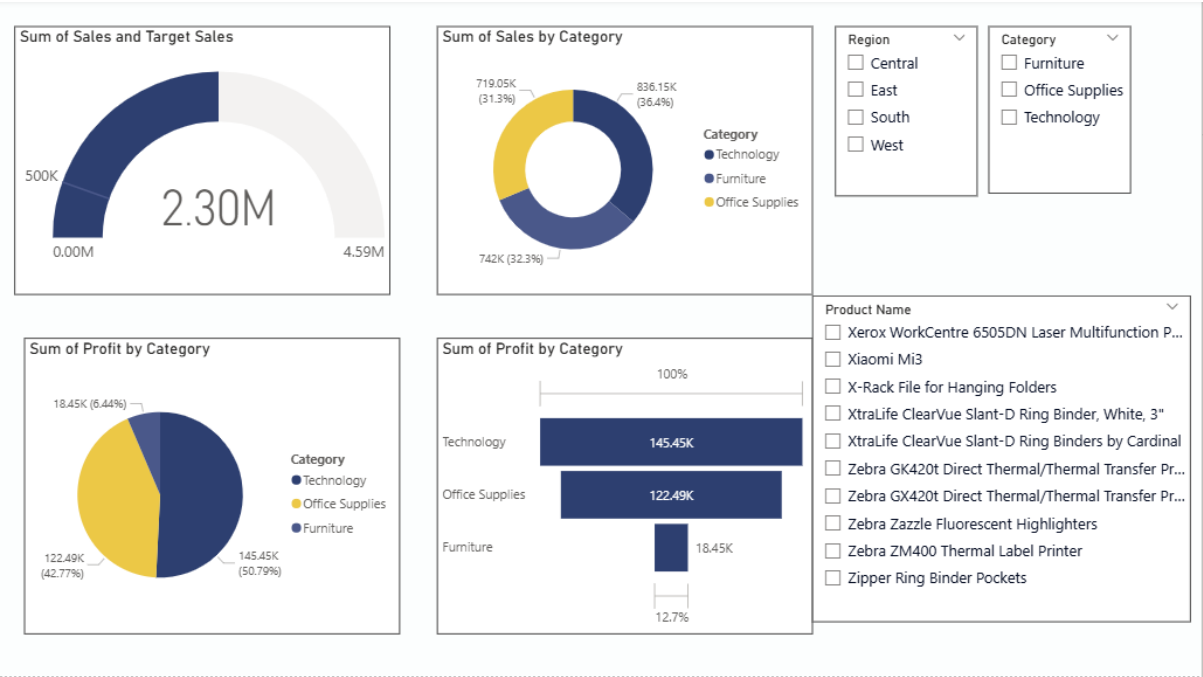

- The Technology category performs better compared to other categories in terms of sales and profit.
- A few products contribute to most of the total sales.
- Sales are not constant and change over time with noticeable ups and downs.
- Furniture and Office Supplies give steady but lower profits compared to Technology.
- Filters like region and category help in exploring data more clearly.

8. CONCLUSION

This dashboard helped me understand how to visualize and analyze business data using Power BI. It makes it easier to track performance, compare categories, and find useful patterns that can help in decision-making.

PAGE:1

Sum of Profit by Category

Category	Sum of Profit	Percentage
Technology	145.45K	50.79%
Office Supplies	122.49K	42.77%
Furniture	18.45K	6.44%

Sum of Profit by Category
